

Patient ID	: ND099347 /OPD	Registration Date	: 07-Sep-2021 5.00 PM
Patient Name	: MR. HARDIK SHARMA	Collection Date	: 07-Sep-2021 5.00 PM
Age / Sex	: 18 Years / Male	Report Date	: 08-Sep-2021 8.00 AM
Referred Dr	: SELF	Contact No	: 7355284896
Sample Type	: NS+TS	Barcode	

RT-PCR High Throughput Advance Molecular Lab

Investigation	Result
RT-PCR COVID-19 Virus Quantitative Test	
N1 GENE	Not Detected
N2 GENE	Not Detected
RESULT (Conclusion)	Negative
Interpretation	

Observation	Interpretation

If only internal Control (IC) positive then	Negative for COVID-19 Virus

If Positive for E-Sarbeco, N Gene RdRP & IC then	Positive for COVID-19 Virus

ICMR No.: NARADIAGLUP
Note

Negative results does not rule out the possibility of COVID-19 infection especially if clinical suspicion is high. The combination of clinical symptoms, typical CT imaging features, and dynamic changes must be considered and test repeated after few days. Rates of Positive PCR may be affected by Stage of the disease and /or its severity, Presence of inhibitors, mutations & insufficient organism RNA can influence the result.

Covid-19 Test conducted as per protocol ICMR/GOI.

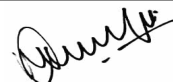

Inconclusive result specimen will be repeated.

Comments

Nasopharyngeal sample: This is the most practical and readily means of confirming Covid-19 diagnosis, with positive rates of ~75% during the first 2 weeks of illness in patients with severe disease. For patients with mild Covid-19, a positive PCR rate of 72% has been reported during the 1st week, dropping to 54% during the 2nd week .
